

## LARGE FORMAT DIGITAL PRINT MEDIA AND LAMINATES

## SELF ADHESIVE VINYL - GRAFIWRAP

The GrafiWrap Vehicle Wrapping System is made from a combination of two self adhesive films: a high quality white cast self adhesive film (Grafiprint S34P, AE38 or AE38C) and an ultra thin transparent laminate (Grafiprint LAMX30, LAMX40 or LAMX45). The combination of these two materials makes a soft and exceptionally flexible 80 or 90 micron film, which fits around your vehicle as a "second skin" and offers excellent protection against UV rays, scratches, stone chips, chemical products, dirt etc...

Thanks to the extra protection that the film is offering to the original paintwork, the vehicle will keep its colour and look after removing the wrap, and will therefore have a higher trade-in value if sold.

Wrap cars, boats or even planes with GrafiWrap.

### ADVANTAGES

- ▶ Superior protection over conventional spray methods.
- ▶ Safe to use in a car wash.
- ▶ No popping out or cracking of graphic.
- ▶ Vehicle/driver down times reduced - quick application.
- ▶ Easy removal at the end of the advertising campaign.

### BENEFITS

- ▶ This is a moving "billboard" and visible to thousands of pedestrians, commuters, shop and office personnel on an ongoing base.
- ▶ When re-spraying a vehicle, the vehicle will be off the road for up to a week and costs the customer time, money and causing inconvenience. With the wrapping of a vehicle, it is off the road for a day only.
- ▶ Un-wrapping takes approximately 2.5 hours, revealing the original, un-faded colour which has been protected by the wrap from scratches, stone chips and discolouring.

With GRAFIWRAP vehicles can be easily transformed into an eye-catching mobile advertisement...
