Spirit FLEX™ Tension System

A low-profile system to tension flexible media

SPiRITFlex™ is a **light-weight, low profile** tensioning system suited to a wide range of graphic and architectural applications. It can be used with almost any type of flexible media and tensions without the need for specialised tools and requires very little finishing.

Applications of SPiRITFlex™ are wide-ranging, from **retail and exhibition to large outdoor signage, hoardings and vehicle livery**. It can be fitted to masonry, dry wall, building cladding, existing signage and light boxes. The speed with which graphics can be replaced, makes it an ideal solution for regularly updated branding and marketing campaigns.

The system consists of **two basic components**; an extruded aluminium profile and a specially designed plastic tensioning profile. The aluminium is first fixed to the base structure using suitable standard fixings. The plastic component is then used to align, fix and tension the media with a minimum of effort. It is, however removable to allow a new graphic to be inserted and tensioned, when required.

Replacement takes a matter of minutes, which **saves valuable time** for the installation team. SPiRITFlex™ is supplied in **3m lengths**, which can be cut down for smaller applications or joined seamlessly to make up larger frames. There is a range of aluminium profiles and components available, each suited to specific applications.

SPiRITFlex™ C SECTION

This frame is a lightweight solution to install and is suitable flexible graphics which require smaller fixings. Ideal for indoor sites like supermarkets, retail stores, coffee shops, restaurants, museums and exhibition stands.

SPiRITFlex™ F SECTION

This profile is used where larger or stronger fixings are required. The additional tail strip provides the space needed for fixing the frame to the mounting surface. Tailored for use on outdoor sites like exterior walls, larger signage frames and rigid truck bodies. It can also be used to convert existing signage to a flexible system.

SPiRITFlex™ PVC TENSION STRIP

Inserted into the aluminium frame to fix the flexible substrate in position and simultaneously create the tension required. Available in black and white as standard colours.
